

Create Engaging Courses Easier Than Ever Before!

Announcing Lectora X Authoring Software

The release of Lectora X marks Trivantis' 10 year anniversary and celebrates ten years of empowering elearning trainers, authors and content creators worldwide. With Lectora X, you'll enjoy decreased development time, easier collaboration, more options to engage end users, and much, much more! It's Trivantis' most ambitious release of Lectora to date and continues the Lectora legacy as the most powerful yet easy-to-use elearning software on the market.

New Features in Lectora X include:

New Flash Characters – Instantly make courses more appealing by utilizing the 26 new diverse Flash characters which also include industry-related characters such as soldiers and doctors. Customize each character with synchronized audio and text as well as borders.

Share Media, Templates & Library Objects Online - Easily store media, templates and library objects online and share them with any and all Lectora users – even those outside your own organization! This makes collaborating on courses fast and simple and eliminates the need to email, FTP, or store media, templates, and library objects on a network.

Dockable Properties Window – View an object's properties quicker and easier. When selecting an object, that object's properties will instantly display anywhere you choose. Move the window around, hide it, or keep it in your desired location.

New & Improved Interface - Lectora features a more user-friendly interface with modern gel buttons and toolbars. Customize your toolbars, dock or float the Title Explorer (left-hand pane), and create a workspace that maximizes efficiency.

Multi-Language Publishing – After translating your title into multiple languages you can easily publish courses to all your desired languages at the same time, saving time and effort.

Customizable Toolbars – Pick and choose which toolbars and toolbar icons you want displayed within Lectora and move them to your desired location.

Expanded Clip Art Library – Adding high-quality, professional images to your course is now a breeze with over 250 new clip art images added to the existing library of 6,000.

Enhanced 508 Compliance – Make courses more compliant with 508 standards with these new features:

- **FLV Closed Captioning** - Easily make your FLV videos 508 compliant by adding closed captioning.
- **Improved Screen Reader Functionality** - Buttons work seamlessly with popular screen readers, such as JAWS.
- **508 Documentation**- Learn to create your own 508 compliant content by utilizing the 508 documentation which also references courses and templates for developing 508 content.

New Flash Games – Make tests more interactive by using the three new Flash games:

- **Hangman** - Guess letters one by one to an answer. With each incorrect guess, a stick figure will be drawn piece by piece just like everyone's favorite road trip game.
- **Image Reveal** - Answer questions to reveal pieces of an image, until the entire image is revealed.
- **Word Scramble** - Unscramble letters to identify the correct word.

Dynamic Titles – Instantly update the text within published titles by editing an associated published XML file. Makes updating published titles fast and easy.

Tip of the Day - To enhance your Lectora skills, each time you open Lectora you can read a helpful tip or trick.

Symbol Library - Save time by easily adding symbols such as copyright and trademark symbols into text.

Mute/Unmute FLV Media – Globally mute and unmute audio across a title for all FLV media.

Save Custom Buttons & Checkboxes - Save custom form elements for titles to ensure consistency when multiple people collaborate on course development or when titles are saved and reused later.

Hide Title, Chapter, and Section Objects – For a more organized and easier to read Title Explorer (left-hand pane), collapse objects such as actions at the title, chapter, or section level.

“This Object” Action Target – For easier copying and pasting of actions to objects, utilize the new target “This Object,” which eliminates the need to list a specific object name as your target.

Translate Object Names - Translate alt tags in published HTML with the ability for the translation tool to optionally translate object names.

Change Contents for Questions - Questions can now be the target for a change contents action, enabling questions to update on the page with the new answer. This is especially helpful when creating interactive, custom questions which include media.

Enhanced Shape Tool – Shapes created by the shape tool feature a smoother, crisper edge.

Error Reporting Functionality - If a Lectora program failure occurs, instantly report error information to Trivantis to review for possible Service Pack releases.

Instant Opening of HTML Folder - Easily access your published folder with all your HTML files by simply clicking the Preview in Browser button.
